College of Education

The College of Education at Temple University, founded in 1919, promotes education as a primary mechanism for social mobility and social justice for all learners. Our mission is to prepare all of our students as educational leaders and agents of change who employ leading-edge understandings and evidence-based practices in their work setting. The College enrolls more than 2,000 of which approximately 800 are graduate students. Our students are economically and culturally diverse, but have in common the desire to acquire the skills needed to become the kind of teacher and/or researcher who can improve the lives of others through education. This richly diverse student population enriches the College, influencing all aspects of academic life, including its programs, curriculum, collaborations, and field placements.

The College of Education supports the University as a national center for excellence in both teaching and research with an international presence and a special commitment to serving the communities of metropolitan Philadelphia. As the largest school of education in the area and among the largest in the state and country, the College has a strong influence on the field, especially in the greater Philadelphia region where city schools and their student and teacher populations are at our doorstep. We educate the largest number of teachers for the large, diverse, and lively urban center of Philadelphia. As a member of the Commonwealth System of Higher Education, we acknowledge a special responsibility to the public and to the schools and school districts across the state.

On our sprawling urban campus in the heart of North Philadelphia, we educate teachers and school leaders who have the knowledge and skills to reach all of our children. Our graduates are problem-solvers, innovators, and creative thinkers. They debate ideas in the abstract, but apply them in practical ways to address the concrete situations that challenge educators every day. They commit themselves to education for the long term, using the newest tools to prepare students not only for the present but for a rapidly expanding and complex world.

Graduate programs at the master’s and doctoral levels prepare students for teaching and also for careers as school administrators, counselors, school psychologists, researchers, policymakers, and professors of education. All programs in the College of Education emphasize clinical experience and practice as a primary means of learning about the profession and acquiring necessary skills and competencies. Although the College defines its central mission as educating highly qualified practitioners, it also seeks to add substantively to the knowledge base informing educational practice. Faculty work closely with dozens of doctoral students each year who, in turn, contribute in significant ways to the pursuit of new knowledge in their fields.
