

Health Information Management Minor

Overview

The **Minor in Health Information Management**, open to all students and offered by the Department in Health Services Administration and Policy, is designed to complement existing programs throughout Temple University, where knowledge of Health Information Management would enhance a student's marketability and overall preparedness for working in the healthcare field. Students will benefit greatly as technology becomes increasingly utilized in every sector of healthcare. The Health Information Management minor provides students in any discipline with the fundamental background in areas of healthcare information technology, electronic health records and documentation, medical terminology and health care systems in the United States. Students participating in this minor will be better equipped to succeed in fieldwork and internships in their major as they will be more familiar with patient portals, electronic records, privacy and security of patient data.

Completing the Health Information Management minor improves students' marketability in many professional paths, including public health, kinesiology, health professions and psychology. The minor also prepares students for professional graduate programs such as physical therapy, occupational therapy, physician assistant or medical school.

Campus Location: Main
