

Genomic Medicine BS with Pre-Medicine Concentration

Overview

Develop a deep understanding of the role of the genomes of humans and pathogens in the development, prevention, and treatment of disease with the **Bachelor of Science in Genomic Medicine**, offered by the Department of Biology. Scientific innovations and technologies allow us to collect genetic information at unprecedented size and scale. At the center of this advancement is the study of the genome. Information from thousands—and soon to be millions—of genomes is revealing the root causes of our genetic and infectious diseases. Due to the growing clinical emphasis on genomic medicine in medical colleges, students in the Genomic Medicine program will acquire a valuable basis for understanding and working with modern biological data. Graduates also gain a foundation in the life sciences that emphasizes the medical relevance of genomics, evolutionary biology, and informatics. This degree will prepare students for growing trends in research and medical careers focused on genomic medicine that use the power of changes in genes, proteins, and next generation technologies to make clinical diagnoses, treat patients, and understand diseases.

Blending psychology and sociology courses with an increased focus on coursework required by most medical schools—biochemistry, cell structure, and function, and bioinformatics or biostatistics—the **optional Pre-Medicine Concentration** prepares graduates for entry into medical school and STEM research careers in medicine.
